Bridges to Science Fiction Eaton Conference on Science Fiction and Fantasy Literature, 1st, University of California, Riverside, 1979 1980 Ten new critical essays written for presentation at the first Eaton Conference on Science Fiction and Fantasy Literature held 24–25 February 1979, at the University of California, Riverside. While critical discussion of science fiction has become increasingly sophisticated during the past decade, there remains a tendency among some teachers and readers to consider science fiction as an independent phenomenon that exists unconnected to the mainstream of our cultural inheritance.

These essays—by Harry Levin, Irving Babbitt Professor of Comparative Literature at Harvard University; Kent T. Kraft, Assistant Professor of Comparative Literature at the University of Georgia, Athens; Stephen Potts, writer and instructor at San Diego State University; Gregory Benford, writer and Associate Professor of Physics at the University of California, Irvine; Robert Hunt, an editor at Glencoe Publishing; Eric S. Rabkin, Professor of English at the University of Michigan; Patrick Parrinder, instructor at the University of Reading, England; Thomas Keeling, Lecturer in English at the University of California, Los Angeles; Carl D. Malmgren, instructor at the University of Oregon, Eugene; and Thomas Hanzo, Professor of English and Chairman of the department at the University of California, Davis—suggest the connections that exist between science fiction and other aspects of Western cultural tradition. Ranging in interest from the specifically philosophical to the specifically literary, the essays relate science fiction to such topics as medieval cosmological discourse, classical empirical philosophy, fairy tale, epic, and Gothic fiction. Emerging from the volume as a whole are both a coherent view of science fiction as a genre and a heightened sense of its complex relation to our cultural heritage.

Insiders' Guide to South Dakota's Black Hills and Badlands Barbara Tomovick 2000 There's much more to South Dakota than Wall Drug and Mount Rushmore, as you will find in The Insiders' Guide to South Dakota's Black Hills and Badlands. The Black Hills and Badlands offer miles upon miles of scenic driving, hiking, biking, horseback riding and more. It's a region of contrasts. You'll find powerful natural beauty here: craggy mountains, mysterious geologic formations, sudden weather changes, towering evergreens, grassy prairie and vistas that will make your heart ache. Let Insiders show you how to make the most of a visit or relocation with the best complete guide to the region.

Glencoe Earth Science Ralph M. Feather 1999 Earth science is the study of Earth and space. It is the study of such things as the transfer of energy in Earth's atmosphere; the evolution of landforms; patterns of change that cause weather; the scale and structure of stars; and the interactions that occur among the water, atmosphere, and land. Earth science in this book is divided into four specific areas of study: geology, meteorology, astronomy, and oceanography. - p. 8-9.

Grazing in Future Multi-scapes: From Thoughtscapes to Landscapes, Creating Health from the Ground Up Pablo Gregorini 2022-09-27 This Research Topic is hosted in partnership with the "Grazing in Future Multi-Scapes" international workshop. The workshop will be held online, 30th May - 5th June 2021. Throughout different landscapes of the world, "grazing" herbivores fulfill essential roles in ecology, agriculture, economies and cultures including: families, farms, and communities. Not only do livestock provide food and wealth, they also deliver ecosystem services through the roles they play in environmental composition, structure and dynamics. Grazing, as a descriptive adjective, locates herbivores within a spatial and temporal pastoral context where they naturally graze or are grazed by farmers, ranchers, shepherds etc. In many cases, however, pastoralism with the single objective of maximizing animal production and/or profit has transformed landscapes, diminishing biodiversity, reducing water and air quality, accelerating loss of soil and plant biomass, and displacing indigenous animals and people. These degenerative landscape transformations have jeopardized present and future ecosystem and societal services, breaking the natural integration of land, water, air, health, society and culture. Land-users, policy makers and societies are calling for alternative approaches to pastoral systems; a call for diversified-adaptive and integrative agro-ecological and food-pastoral-systems designs that operate across multiple scales and 'scapes' (e.g. thought-, social-, land-, food-, health-, wild-scapes), simultaneously. There needs to be a paradigm shift in pastoral production systems and how grazing herbivores are managed –grazed- within them, derived initially from a change in perception of how they provide wealth. The thoughtscales will include paradigm shifts where grazers move away from the actual archetype of pastoralism, future landscapes are re-imagined, and regenerative and sustainable management paradigms are put in place to achieve these visions. From this will come a change in collective thinking of how communities and cultures (socialscapes) perceive their relationships with pastoral lands. The landscapes are the biotic and abiotic four-dimensional domains or environments in need of nurture. Landscapes are the tables where humans and herbivores gain their nourishment, i.e. foodscapes. Foodscapes and dietary perceptions, dictate actions and reactions that are changing as developed countries grapple with diseases related to obesity, and people starve in developing countries. Societies are demanding healthscapes and nutraceutical foodscapes, and paradoxically, some are moving away from animal products. While indigenous species of animals, including humans (wildscapes), have been displaced from many of their lands by monotonic pastoralism, multifunctional pastoral systems can be designed in view of dynamic multi-scapes of the future. The purpose of this Research Topic is to influence future mental and practical models of pastoralism in continually evolving multi-scapes. We seek a collection of papers that will cultivate such a shift in thinking towards future models of sustainable multipurpose pastoralism. The contributions will be synthesized to establish how multifunctional pastoral systems can be re-imagined and then designed in view of the integrative dynamics of sustainable future multi-scapes.
