Technological Entrepreneurship in China Claudio Petti 2012-04-01 'This unique book offers a series of case studies about how technology creation has evolved in China. This is an in-depth perspective about the trajectory and the entrepreneurial transformations of some successful high-tech Chinese companies in different industries. The book pictures as well the roles played by government, universities and companies in fostering regional systems of innovation in different parts of China. Written by Chinese and foreign experts, those views are not partial; authors reveal an untruncated and thorough analysis.' Dominique Jolly, SKEMA Business School, France Bringing technologies to the market, thereby creating profits, high-qualified jobs and industrial upgrading is one of the means by which China can fuel its brand new growth model based on innovation and sustainability. Much is known about the mechanisms of technological entrepreneurship. But how does this happen in China? Who is doing what? Is there a 'Chinese way' to do technological entrepreneurship? This thought-provoking book provides readers with a closer look at these issues and clarifies them through a number of case studies discussed from the perspectives of both Chinese and international contributors. Technological Entrepreneurship in China offers a comprehensive and practical assessment of technological entrepreneurship in China. Exclusively based on cases, the book tackles the issues of technological entrepreneurship in China from a systemic view. In so doing the book provides an account of the main factors at work behind Chinese technological entrepreneurship and their interplay, the past and present transitions facing Chinese technology-based enterprises, and how those transitions were and are being dealt with. It offers a glimpse in a huge natural experiment that will prove insightful for both scholars and policymakers.

End-to-end Integration with IBM Sterling B2B Integration and Managed File Transfer solutions James Ballentine 2012-07-21 Across numerous vertical industries, enterprises are challenged to improve processing efficiency as transactions flow from their business communities to their internal systems and vice versa, simplify management and expansion of the external communities, accommodate customer and supplier preferences, govern the flow of information, enforce policy and standards, and protect sensitive information. Throughout this process, external partners must be on-boarded and off-boarded, information must flow across multiple communications infrastructures, and data must be mapped and transformed for consumption across multiple applications. Some transactions require synchronous or real-time processing while others are of a more periodic nature. For some classes of customer or supplier, the enterprise might prefer a locally-managed, on-premise solution. For some types of communities (often small businesses), an as-a-Service solution might be the best option. Many large enterprises combine the on-premise and as-a-Service approach to serve different categories of business partners (customers or suppliers). This IBM® Redbooks® publication focuses on solutions for end-to-end integration in complex value chains and presents several end-to-end common integration scenarios with IBM Sterling and IBM WebSphere® portfolios. We believe that this publication will be a reference for IT Specialists and IT Architects implementing an integration solution architecture involving IBM Sterling and IBM WebSphere portfolios.

Parallel Solution of Integral Equation-Based EM Problems in the Frequency Domain Y. Zhang 2009-06-29 A step-by-step guide to parallelizing cem codes The future of computational electromagnetics is changing drastically as the new generation of computer chips evolves from single-core to multi-core. The burden now falls on software programmers to revamp existing codes and add new

functionality to enable computational codes to run efficiently on this new generation of multi-core CPUs. In this book, you'll learn everything you need to know to deal with multi-core advances in chip design by employing highly efficient parallel electromagnetic code. Focusing only on the Method of Moments (MoM), the book covers: In-Core and Out-of-Core LU Factorization for Solving a Matrix Equation A Parallel MoM Code Using RWG Basis Functions and ScaLAPACK-Based In-Core and Out-of-Core Solvers A Parallel MoM Code Using Higher-Order Basis Functions and ScaLAPACK-Based In-Core and Out-of-Core Solvers Turning the Performance of a Parallel Integral Equation Solver Refinement of the Solution Using the Conjugate Gradient Method A Parallel MoM Code Using Higher-Order Basis Functions and Plapack-Based In-Core and Out-of-Core Solvers Applications of the Parallel Frequency Domain Integral Equation Solver Appendices are provided with detailed information on the various computer platforms used for computation; a demo shows you how to compile ScaLAPACK and PLAPACK on the Windows® operating system; and a demo parallel source code is available to solve the 2D electromagnetic scattering problems. Parallel Solution of Integral Equation-Based EM Problems in the Frequency Domain is indispensable reading for computational code designers, computational electromagnetics researchers, graduate students, and anyone working with CEM software.
