BOOMERVILLE: Getting Off the Corporate Merry-Go-Round Michael Hib 2013-12 As millions of baby boomers head toward retirement and to new ventures, the world in which we live and work is shrinking rapidly. Many more countries attempt to become an economic player and US competitor as the global economy emerges. Rapidly expanding technologies and communications are enabling more countries to become borderless within a global economic community of creative destruction competitors on a global stage and 24 hour global clock. There is a convergence of five powerful forces BIG data captured and

retrieved by virtualization digital storage, mobile computing, expanded use of social media, cloud computing, and SaaS applications as businesses move closer to achieving the possibilities of the new gig economy, where all five forces are mature, implemented, and truly integrated rather than precariously bolted on. These five forces offer a new set of tools for business, opening the door to a new set of rules for operations, performance, and competition, making just-in-time freelancing and free-agent contracting more attractive. These are uncommon times to have five powerful forces all newly emerged, all evolving, all technology-centric already impacting businesses. It is an opportunity for IT to deliver extraordinary value via modest investments on top of a strong legacy technology footprint. These tectonic changes advance at a time when our worldwide talent pool is shrinking, increased migration from rural to larger cities, and global cohorts entering their senior years adding to the financial burden for elderly care globally. To survive this chaos, work is continuously being redefined, business models can change on the fly, and a new form of business structure, leadership, management, and workforce emerges in the new gig economy. Millions of retiring baby boomers getting off the corporate merry-go-round will play a crucial role as freelancers and free agents in bridging the gaps in skills, talent, business wisdom, and sustainability

Climate Justice and Community Renewal Brian Tokar 2020-04-16 This book brings together the voices of people from five continents who live, work, and research on the front lines of climate resistance and renewal. The many contributors to this volume explore the impacts of extreme weather events in Africa, the Caribbean and on Pacific islands, experiences of life-long defenders of the land and forests in Brazil, India, Indonesia, and eastern Canada, and efforts to halt the expansion of fossil-fuel infrastructure from North America to South Africa. They offer various perspectives on how a just transition toward a fossil-free economy can take shape, as they share efforts to protect water resources, better feed their communities, and implement new approaches to urban policy and energy democracy. Climate Justice and Community Renewal uniquely highlights the accounts of people who are directly engaged in local

climate struggles and community renewal efforts, including on-the-ground land defenders, community organizers, leaders of international campaigns, agroecologists, activist-scholars, and many others. It will appeal to students, researchers, activists, and all who appreciate the need for a truly justice-centered response to escalating climate disruptions.

Walk the Wire David Baldacci 2020-04-21 Amos Decker—?the FBI consultant with a perfect memory—returns to solve a gruesome murder in a booming North Dakota oil town in the newest thriller in David Baldacci's #1 New York Times bestselling Memory Man series. When Amos Decker and his FBI colleague Alex Jamison are called to London, North Dakota, they instantly sense that the thriving fracking town is ripe for trouble. The promise of a second gold rush has attracted an onslaught of newcomers all hoping for a windfall, and the community is growing faster than houses can be built. The sudden boom has also brought a slew of problems with it, including drugs, property crimes, prostitution—and now murder. Decker and Jamison are ordered to investigate the death of a young woman named Irene Cramer, whose body was expertly autopsied and then dumped in the open—which is only the beginning of the oddities surrounding the case. As Decker and Jamison dig into Irene's life, they are shocked to discover that the woman who walked the streets by night as a prostitute was a teacher for a local religious sect by day—a sect operating on land once owned by a mysterious government facility that looms over the entire community. London is a town replete with ruthless business owners, shady government officials, and religious outsiders, all determined to keep their secrets from coming out. When other murders occur, Decker will need all of his extraordinary memory and detective skills, and the assistance of a surprising ally, to root out a killer and the forces behind Cramer's death . . . before the boom town explodes.

Motherhood and Social Exclusion Christie Byvelds 2019-06-01 Though the negative effects of social exclusion are well documented, there is a paucity of research on women's experiences of social exclusion as they relate to mothering within the institution of motherhood. Social exclusion is a socially

constructed concept; it refers to a multi-dimensional form of systematic discrimination driven by unequal power relationships. It is the denial of equal opportunities, resources, rights, goods, and services for some, by others, within economic, social, cultural, and political arenas. Carrying, birthing, and mothering children place women in a unique position to face social exclusion based on their role as mothers. Perhaps at no other time in our lives could we benefit more from feeling as though we are engaged in our community than when we enter into and are experiencing the patriarchal institution of motherhood. As the widely used proverb states, "It takes a village to raise a child", it also takes a village (of societal institutions) to support mothers. Saint Mary's University

Oil Gavin Bridge 2017-06-05 Oil pulses through our daily lives. It is the plastic we touch, the food we eat, and the way we move. Oil politics in the twentieth century was about the management of abundance, state power, and market growth. The legacy of this age of plenty includes declining conventional oil reserves, volatile prices, climate change, and enduring poverty in many oil-rich countries. The politics of oil are now at a turning point, and its future will not be like its past. In this in-depth primer to one of the world's most significant industries, authors Gavin Bridge and Philippe Le Billon take a fresh look at the contemporary political economy of oil. Going beyond simple assertions of peak oil and an oil curse, they point to an industry reordered by global shifts in demand toward Asia, growing reliance on unconventional reserves, international commitments to reduce carbon emissions, a growing campaign for fossil fuel divestment, and violent political struggles in many producer states. As a new geopolitics of oil emerges, the need for effective global oil governance becomes imperative. Highlighting the growing influence of civil society and attentive to the efforts of firms and states to craft new institutions, this fully updated second edition identifies the challenges and opportunities to curtail price volatility, curb demand and the growth of dirty oil, decarbonize energy systems, and improve governance in oil-producing countries.

The Revolution Where You Live Sarah van Gelder 2017-01-09 Discover the Real Revolution Unfolding

across America America faces huge challenges—climate change, social injustice, racist violence, economic insecurity. Journalist Sarah van Gelder suspected that there were solutions, and she went looking for them, not in the centers of power, where people are richly rewarded for their allegiance to the status quo, but off the beaten track, in rural communities, small towns, and neglected urban neighborhoods. She bought a used pickup truck and camper and set off on a 12,000-mile journey through eighteen states, dozens of cities and towns, and five Indian reservations. From the ranches of Montana to the coalfields of Kentucky to the urban cores of Chicago and Detroit, van Gelder discovered people and communities who are remaking America from the ground up. Join her as she meets the quirky and the committed, the local heroes and the healers who, under the mass media's radar, are getting stuff done. The common thread running through their work was best summed up by a phrase she saw on a mural in Newark: "We the People LOVE This Place." That connection we each have to our physical and ecological place, and to our human community, is where we find our power and our best hopes for a new America.

Rural Communities Cornelia Butler Flora 2018-03-05 Communities in rural America are a complex mixture of peoples and cultures, ranging from miners who have been laid off in West Virginia, to Laotian immigrants relocating in Kansas to work at a beef processing plant, to entrepreneurs drawing up plans for a world-class ski resort in California's Sierra Nevada. Rural Communities: Legacy and Change uses its unique Community Capitals framework to examine how America's diverse rural communities use their various capitals (natural, cultural, human, social, political, financial, and built) to address the modern challenges that face them. Each chapter opens with a case study of a community facing a particular challenge, and is followed by a comprehensive discussion of sociological concepts to be applied to understanding the case. This narrative, topical approach makes the book accessible and engaging for undergraduate students, while its integrative approach provides them with a framework for understanding rural society based on the concepts and explanations of social science. This fifth edition is updated

throughout with 2013 census data and features new and expanded coverage of health and health care, food systems and alternatives, the effects of neoliberalism and globalization on rural communities, as well as an expanded resource and activity section at the end of each chapter.

Atlas of Material Worlds Matthew Seibert 2021-08-17 Atlas of Material Worlds is a highly designed narrative atlas illustrating the agency of nonliving materials with unique, ubiquitous, and often hidden influence on our daily lives. Employing new materialism as a jumping-off point, it examines the increasingly blurry lines between the organic and inorganic, engaging the following questions: What roles do nonliving materials play? Might a closer examination of those roles reveal an undeniable agency we have long overlooked or disregarded? If so, does this material agency change our understanding of the social structures, ecologies, economies, cosmologies, technologies, and landscapes that surround us? And, perhaps most importantly, why does material agency matter? This is the story of the world's driest nonpolar desert, pink flamingos, and cerulean blue lithium ponds; industrial shipping logistics, pudding-like jiggling substrates, and monuments of mud; galactic bodies, radioactive sheep, and the yellowcake of uranium. Put simply, this book dares readers to see the world anew, from material up. Atlas of Material Worlds offers this new relationship to our host environment in a time of mounting crises—accelerating climate change, ballooning socioeconomic inequality, and rising toxic nationalism—uniquely telling materialist stories for practitioners and students in landscape, architecture, and other built environment disciplines.

Inclusive Transport Hans Jeekel 2018-10-29 Inclusive Transport: Fighting Involuntary Transport Disadvantages offers readers profound and multifaceted insights into transportation and social equity, guiding transportation and urban studies researchers, planners, and policy makers in evaluating potential

solutions to this complex issue. It considers discrimination and its societal consequences, providing a needed perspective on who is left out of transportation planning, and why. The book is systematically divided into 2 parts, Part A is problem oriented and explores the main problems to the transportation disadvantaged; accessibility and affordability. It looks at the consequences of non-accessibility, the problems non-car owners face, and the interplay between housing and transportation; Part B is policy oriented and analyses how current policies tend to forget transport disadvantages. It looks at pragmatic solutions for transport disadvantaged and ends with a design for inclusive transport, being a more radical approach combining sustainability challenges, people's behaviours and emotions, creating more just and equitable mobility. Synthesizes academic research and narratives on transport disadvantage and the transport disadvantaged, linking the research with current mobility policies and practices Connects the fight on transport disadvantages with sustainable and smart mobility strategies and looks into car sharing, ride sharing and individualising public transport while de-individualizing car use Has an extensive usage of data, figures, and examples from around the world, and inspiring mobility plans and policies When the Hills Are Gone Thomas W. Pearson 2017-10-31 Fracking is one of the most controversial methods of fossil fuel extraction in the United States, but a great deal about it remains out of the public eye. In Wisconsin it has ignited an unprecedented explosion in the state's sand mining operations, an essential ingredient in hydraulic fracturing that has shaken local communities to the core. In When the Hills Are Gone, Thomas W. Pearson reveals the jolting impact of sand mining on Wisconsin's environment and politics. A source of extraordinary wealth for a lucky few, and the cause of despoiled land for many others, sand mining has raised alarm over air quality, water purity, noise, blasting, depressed tourism, and damage to the local way of life. It has also spurred a backlash in a grassroots effort that has grown into a mature political movement battling a powerful mining industry. When the Hills Are Gone tells the story of Wisconsin's sand mining wars. Providing on-the-ground accounts from both the mining industry and the concerned citizens who fought back, Pearson blends social theory,

ethnography, stirring journalism, and his own passionate point of view to offer an essential chapter of Wisconsin's history and an important episode in the national environmental movement. Digging deep into the struggles over place, community, and local democracy that are occurring across the United States, When the Hills Are Gone gives vital insight into America's environmental battles along the unexpected frontlines of energy development.

America Goes Green Kim Kennedy White 2013 Explores the history and evolution of environmentalism in modern America, featuring essays that look at environmental issues facing each state, primary source documents, and thematic A to Z entries.

Oil, Gas, and Crime Rick Ruddell 2017-07-22 This book addresses the causes of rising crime rates resulting from the rapid population growth and industrialization associated with natural resource extraction in rural communities. Ruddell describes the social problems emerging in these boomtowns, including increases in antisocial behavior, as well as property-related and violent crime, industrial mishaps and traffic collisions. Many of the victims of these crimes are already members of vulnerable or marginalized groups, including rural women, Indigenous populations, and young people. The quality of life in boomtowns also decreases due to environmental impacts, including air, water and noise pollution. Law enforcement agencies, courts, and correction facilities in boomtowns are often overwhelmed by the growing demand as these places are seldom able to manage the population growth. The key questions addressed here are: who should pay the costs of managing these booms, and how can we prepare communities to mitigate the worst effects of this growth and development and, ultimately, increase the quality of life for boomtown residents. An in-depth and timely study, this original work will be of great interest to scholars of violent crime, criminal justice, and corporate harm.

The Mad Feast: An Ecstatic Tour through America's Food Matthew Gavin Frank 2015-11-09 Finalist for the Art of Eating Prize A richly illustrated culinary tour of the United States through fifty signature dishes, and a radical exploration of our gastronomic heritage. Following his critically acclaimed Preparing the

Ghost, renowned essayist Matthew Gavin Frank takes on America's food. In a surprising style reminiscent of Maggie Nelson or Mark Doty, Frank examines a quintessential dish in each state, interweaving the culinary with personal and cultural associations of each region. From key lime pie (Florida) to elk stew (Montana), The Mad Feast commemorates the unexpected origins of the familiar. Brazenly dissecting the myriad intersections between history and food, Frank, in this gorgeously designed volume, considers politics, sexuality, violence, grief, and pleasure: the cool, creamy whoopie pie evokes toughness in the face of New England winters, while the stewlike perloo serves up an exploration of food and race in the South. Tracing an unpredictable map of our collective appetites, The Mad Feast presents a beguiling flavor profile of the American spirit.

Fracking Michael D. Holloway 2018-06-14 Since the first edition of Fracking was published, hydraulic fracturing has continued to be hotly debated. Credited with bringing the US and other countries closer to "energy independence," and blamed for tainted drinking water and earthquakes, hydraulic fracturing ("fracking") continues to be one of the hottest topics and fiercely debated issues in the energy industry and in politics. Covering all of the latest advances in fracking since the first edition was published, this expanded and updated revision still contains all of the valuable original content for the engineer or layperson to understand the technology and its ramifications. Useful not only as a tool for the practicing engineer solve day-to-day problems that come with working in hydraulic fracturing, it is also a wealth of information covering the possible downsides of what many consider to be a very valuable practice. Many others consider it dangerous, and it is important to see both sides of the argument, from an apolitical, logical standpoint. While induced hydraulic fracturing utilizes many different engineering disciplines, this book explains these concepts in an easy to understand format. The primary use of this book shall be to increase the awareness of a new and emerging technology and what the various ramifications can be. The reader shall be exposed to many engineering concepts and terms. All of these ideas and practices

shall be explained within the body. A science or engineering background is not required. Red Nation Rising Nick Estes 2021-07-06 Red Nation Rising is the first book ever to investigate and explain the violent dynamics of bordertowns. Bordertowns are white-dominated towns and cities that operate according to the same political and spatial logics as all other American towns and cities. The difference is that these settlements get their name from their location at the borders of current-day reservation boundaries, which separates the territory of sovereign Native nations from lands claimed by the United States. Bordertowns came into existence when the first US military forts and trading posts were strategically placed along expanding imperial frontiers to extinguish indigenous resistance and incorporate captured indigenous territories into the burgeoning nation-state. To this day, the US settler state continues to wage violence on Native life and land in these spaces out of desperation to eliminate the threat of Native presence and complete its vision of national consolidation "from sea to shining sea." This explains why some of the most important Native-led rebellions in US history originated in bordertowns and why they are zones of ongoing confrontation between Native nations and their colonial occupier, the United States. Despite this rich and important history of political and material struggle, little has been written about bordertowns. Red Nation Rising marks the first effort to tell these entangled histories and inspire a new generation of Native freedom fighters to return to bordertowns as key front lines in the long struggle for Native liberation from US colonial control. This book is a manual for navigating the extreme violence that Native people experience in reservation bordertowns and a manifesto for indigenous liberation that builds on long traditions of Native resistance to bordertown violence.

Mediterranean Archaeologies of Insularity in an Age of Globalization Anna Kouremenos 2020-06-30 Recently, complex interpretations of socio-cultural change in the ancientMediterranean world have emerged that challenge earlier models. Influenced bytoday's hyper-connected age, scholars no longer perceive the Mediterranean as a static place where "Greco-Roman" culture was dominant, but rather see

it as advnamic and connected sea where fragmentation and uncertainty, along with mobility and networking, were the norm. Hence, a current theoretical approach to studyingancient culture has been that of globalization. Certain eras of Mediterranean history (e.g., the Roman empire) known for their increased connectivity have thus been analyzed from a globalized perspective that examines rhizomal networking, culturaldiversity, and multiple processes of social change. Archaeology has proven a usefuldiscipline for investigating ancient "globalization" because of its recent focus on howidentity is expressed through material culture negotiated between both local and global influences when levels of connectivity are altered. One form of identity that has been inadequately explored in relation to globalizationtheory is insularity. Insularity, or the socially recognized differences expressed bypeople living on islands, is a form of self-identification created within a particular space and time. Insularity, as a unique social identity affected by "global" forces, should be viewed as an important research paradigm for archaeologies concerned with re-examining cultural change. The purpose of this volume is to explore how comparative archaeologies of insularitycan contribute to discourse on ancient Mediterranean "globalization." The volume's theme stems from a colloquium session that was chaired by the volume's co-editors at the Annual Meeting of the Archaeological Institute of America in January 2017. Given the current state of the field for globalization studies in Mediterranean archaeology, this volume aims to bring together for the first time archaeologists working ondifferent islands and a range of material culture types to examine diachronically how Mediterranean insularities changed during eras when connectivity increased, such asthe Late Bronze Age, the era of Greek and Phoenician colonization, the Classicalperiod, and during the High and Late Roman imperial eras. Each chapter aims tosituate a specific island or island group within the context of the globalizing forces and networks that conditioned a particular period, and utilizes archaeological material toreveal how islanders shaped their insular identities, or notions of insularity, at thenexus of local and global influences. Energy and Water, and Related Agencies Appropriations for Fiscal Year 2007 United States. Congress. Senate. Committee on Appropriations. Subcommittee on Energy and Water, and Related Agencies 2007 The New Map Daniel Yergin 2020-09-15 A new type of Cold War is emerging between China and the West. The global order is being simultaneously shaken by climate change and the shale revolution in oil and gas - and now by the coronavirus. Controversial fracking technology has given America unprecedented leverage as the world's leading energy powerhouse, ahead of Saudi Arabia and Russia, upending the chessboard of global politics and changing the psychology of the global economy. Despite being weighed down by sanctions, Russia is pivoting east toward China as Vladimir Putin and Xi Jinping unite to challenge America and lay claim to almost all of the South China Sea, one of the world's most critical trade routes. Elsewhere, the map of the Middle East created after World War I is being attacked by ISIS and Iran's Revolutionary Guards as the region struggles to come to grips with the recent oil price collapse caused by the rise of shale. Oil producers, from the Middle East and Moscow to corporate

boardrooms around the world, now fear that peak demand for oil is coming as renewable energy vies with fossil fuels. The New Map tells a sweeping story about how the role of energy in climate change is shaping geopolitical discussions, challenging our industries and our lifestyles, and accelerating a second energy revolution - the quest for renewables. It also brings realism to the debates over the energy transition.

Taboo Comedy Chiara Bucaria 2016-11-26 The essays in this collection explore taboo and controversial humour in traditional scripted (sitcoms and other comedy series, animated series) and non-scripted forms (stand-up comedy, factual and reality shows, and advertising) both on cable and network television. Whilst the focus is predominantly on the US and UK, the contributors also address more general and global issues and different contexts of reception, in an attempt to look at this kind of comedy from different perspectives. Over the last few decades, taboo comedy has become a staple of television programming, thus raising issues concerning its functions and appropriateness, and making it an extremely relevant subject for those interested in how both humour and television work. Fundamentals of Research in Criminology and Criminal Justice Ronet D. Bachman 2015-12-19 Fundamentals of Research in Criminology and Criminal Justice: With Selected Readings, by well-known researchers Ronet D. Bachman, Russell K. Schutt, and Peggy S. Plass, is a unique resource for understanding the multifaceted subject of research methods in the field of criminology and criminal justice, amply illustrated by carefully selected and edited research articles from the leading journals in the field. Each of these articles features an introduction, written to draw the student's attention to the specific concept(s) from the chapter that are illustrated in the article, and a series of questions about the article, designed to help the student think critically about and reflect on these concepts. In this way, students not only learn how to conduct research, but also learn why it is important to do so. Building off the widely adopted Fundamentals of Research in Criminology and Criminal Justice, the additional readings increase students' understanding of complex issues being investigated in the field today and how those issues are being researched. Subcommittee on Energy and Water, and Related Agencies 2006 The Boom Russell Gold 2014-04-08 The "best all-around book yet on fracking" (San Francisco Chronicle) from a Pulitzer Prize finalist: "Gold's work is a tour de force of contemporary journalism" (Booklist). First invented in 1947, hydraulic fracturing, or fracking, has not only become a major source of energy, it is changing the way we use energy, and the energy we use. It is both a threat and a godsend for the environment, and it is leading the revival of manufacturing in the United States. A definitive narrative history, The Boom follows the twists and turns in the development and adoption of this radical technology. It is a thrilling journey filled with colorful characters: the green-minded Texas oilman who created the first modern frack; a bare-knuckled Oklahoman natural gas empire-builder who gave the world an enormous new supply of energy and was brought down by his own success and excesses; an environmental leader whose embrace of fracking brought an end to his public career; and an aging fracking pioneer who is now trying to save the industry from itself. A fascinating and exciting exploration

of one of the most controversial and promising sources of energy, The Boom "brings new clarity to a subject awash in hype from all sides...a thoughtful, well-written, and carefully researched book that provides the best overview yet of the pros and cons of fracking. Gold quietly leads both supporters and critics of drilling to consider other views" (Associated Press).

Journalism, Politics, and the Dakota Access Pipeline Ellen Moore 2018-12-17 This book explores tensions surrounding news media coverage of Indigenous environmental justice issues, identifying them as a fruitful lens through which to examine the political economy of journalism, American history, human rights, and contemporary U.S. politics. The book begins by evaluating contemporary American journalism through the lens of "deep media", focusing especially on the relationship between the drive for profit, professional journalism, and coverage of environmental justice issues. It then presents the results of a framing analysis of the Standing Rock movement (#NODAPL) coverage by news outlets in the USA and Canada. These findings are complemented by interviews with the Standing Rock Sioux Tribe, whose members provided their perspectives on the media and the pipeline. The discussion expands by considering the findings in light of current U.S. politics, including a Trump presidency that employs "law and order" rhetoric regarding people of color and that often subjects environmental issues to an economic "cost-benefit" analysis. The book concludes by considering the role of social media in the era of "Big Oil" and growing Indigenous resistance and power. Examining the complex interplay between social media, traditional journalism, and environmental justice issues, Journalism, Politics, and the Dakota Access Pipeline: Standing Rock and the Framing of Injustice will be of great interest to students and scholars of environmental communication, critical political economy, and journalism studies more broadly.

The Bakken Goes Boom William Rodney Caraher 2016 In 2008, the Bakken went boom. Thanks to advances in hydraulic fracturing, oil production in western North Dakota exploded. As the price of oil went up, so did the oil rigs. People came from all over the country (and the world) in search of work, and cities

and towns struggled to keep up. This book is about the challenges they faced. It is about the human dimensions of the boom, as told by artists, poets, journalists, and scholars. It captures the boom at its peak, before the price of oil fell and the boom went bust. It sheds light on the impact of oil on local communities that, until now, had not attracted much interest from the outside world. And it shows how North Dakotans, both old and new, have found ways to address the challenges they face in a turbulent, changing environment.

Snake Oil Richard Heinberg 2014-02-10 The rapid spread of 'fracking' (hydraulic fracturing) has temporarily boosted natural gas and oil production, particularly in the USA, but it has also sparked a massive environmental backlash in local communities. The fossil fuel industry is promoting fracking as the biggest energy development of the century, with seductive promises of energy independence and benefits to local economies. Snake Oil casts a critical eye on the oil-industry hype that has hijacked the discussion over energy security. This is the first book to look at fracking from both economic and environmental perspectives, informed by the most thorough analysis of shale gas and oil drilling data ever undertaken. Is fracking the miracle cure-all to our energy ills, or a costly distraction from the necessary work of reducing our fossil fuel dependence?

Sic Semper Res Publica Nathan Richendollar 2013-09 "Sic Semper Res Publica "describes how America is following down the road of the Roman Republic, Ming Chinese Dynasty, Tokugawa Shogunate, and many other fallen civilizations. In The Quest, Yergin shows us how energy is an engine of global political and economic change and conflict, in a story that spans the energies on which our civilization has been built and the new energies that are competing to replace them. The Inheritance Niki Kapsambelis 2017-03-07 "The DeMoe family has the most devastating form of [Alzheimer's] that there is: early onset Alzheimer's, an inherited genetic mutation that causes the disease in 100 percent of cases, and has a 50 percent chance of being passed onto the next generation. Of the six DeMoe children whose father had it, five have inherited the gene; the sixth, Karla, has inherited responsibility for all of them. <u>Frackopoly</u> Wenonah Hauter 2014-10-14 "The definitive story on how big oil and gas corporations captured our political system . . . and the growing grassroots movement to retake our democracy" (Mark Ruffalo). Over the past decade a new and controversial energy extraction method known as hydraulic fracturing, commonly referred to as fracking, has rocketed to the forefront of US energy production. With fracking, millions of gallons of water, dangerous chemicals, and sand are injected under high pressure deep into the earth, fracturing hard rock to release oil and gas. Wenonah Hauter, one of the nation's leading public interest advocates, argues that the rush to fracking is dangerous to the environment and treacherous to human health. Frackopoly describes how the fracking industry began; the technologies that make it possible; and the destruction and poisoning of clean water sources with the release of harmful radiation from deep inside shale deposits, creating what the author calls "sacrifice zones" across the American landscape. The book also examines the powerful interests that have supported fracking, including leading environmental groups, and offers a thorough debunking of its supposed economic benefits. With a wealth of new data, Frackopoly is an essential and riveting read for anyone interested in

protecting the environment and ensuring a healthy and sustainable future for all Americans.
